- 4.80/4.00—8
- 4.80/4.00—10

Since our tires can never go flat, we call them Flatfree™. Because our tires are made of high density foam, they exhibit low rolling resistance which makes jobs easier. Unlike open cell tires, Amerityre's polyurethane foam tire do not absorb water and suffer performance degradation in wet environments. Our materials are UV and ozone resistant and last longer two times longer than the competition.

Testing has shown our polyurethane foam material to be superior to competitive materials in the following areas:

- ✦ High abrasion resistance / longer life
- ✦ True closed cell technology / no water absorption
- ✦ High density material / excellent load carrying capability
- ✦ UV and ozone resistant / will not break down
